Driv-en v1.0

Section 1 – Core System Overview

Driv-en v1.0 Sec1-Doc1

Vision & Product Summary

Product Vision

Driv-en is a modular, enterprise-grade SaaS platform built for contractors and operational industries that need clarity, compliance, and audit-ready documentation without the complexity of legacy systems. The platform delivers a unified operational environment where equipment, safety, and project workflows are standardized, accessible, and fully documented.

Driv-en's vision is to become the industry standard for operational clarity — a system where every workflow is intentional, every module is modular, and every action is traceable.

Purpose of Driv-en

Driv-en solves three core industry problems:

- Fragmented systems that force teams to juggle multiple apps
- Inconsistent documentation that fails audits
- Lack of operational visibility across equipment, safety, and project workflows

Driv-en consolidates these into a single, structured, audit-ready platform.

Target Users

- Contractors
- Field supervisors
- Safety managers
- Equipment managers
- Project administrators
- Executives needing operational visibility

v1.0 Scope

Version 1.0 includes four modules:

- **Core Module**
- **Equipment Module**
- **Safety Module**
- **Project Module**

Deferred for future versions:

- RFIs
- Daily Reports

- Scheduling
- Pipeline Module
- Advanced analytics
- Integrations

Product Principles

- Operational clarity
- Audit-ready documentation
- Modular architecture
- Accessibility and universal usability
- Predictable workflows
- Minimal cognitive load

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec1-Doc2

System Architecture Overview

Architectural Philosophy

Driv-en is built on a modular architecture that isolates responsibilities while maintaining unified data standards. Each module operates independently but shares a common Core foundation for authentication, permissions, and document control.

Platform Layers

- **Core Layer** — Authentication, permissions, user roles, document control, notifications
- **Module Layer** — Equipment, Safety, Project
- **Data Layer** — Shared entities, relationships, audit logs
- **UI/UX Layer** — Standardized layouts, filter bars, hero title bar

Module Interaction

Modules communicate through:

- Shared Core entities
- Standardized naming conventions
- Cross-module references (e.g., equipment used on a project)
- Document access rules enforced server-side

Data Flow

- Users interact with module-specific workflows
- Data is stored in module-specific tables
- Core enforces permissions and visibility
- Audit logs track every change

v1.0 Boundaries

No scheduling, no RFIs, no daily reports, no pipeline. All workflows are intentionally scoped to ensure stability and clarity.

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec1-Doc3

Core Module Overview

Purpose

The Core Module is the foundation of the entire platform. It provides authentication, permissions, document control, and shared system objects.

Responsibilities

- User accounts
- Roles & permissions
- Document access control
- Notifications
- Company settings
- Audit logs

Key Entities

- User
- Role
- Permission
- Document
- AuditLog
- Company

v1.0 Workflows

- User onboarding
- Role assignment
- Document upload & versioning
- Access control enforcement

Deferred Items

- Multi-company support
- SSO integrations
- Advanced reporting

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec1-Doc4

Equipment Module Overview

Purpose

The Equipment Module manages the lifecycle of all equipment assets, inspections, maintenance, and documentation.

Responsibilities

- Equipment inventory
- Inspection schedules
- Maintenance logs
- Equipment documents
- Status tracking

Key Entities

- Equipment
- EquipmentType
- Inspection
- MaintenanceRecord
- EquipmentDocument

v1.0 Workflows

- Add equipment
- Assign equipment
- Perform inspections
- Log maintenance
- Upload equipment documents

Deferred Items

- GPS/telematics integrations
- Automated maintenance reminders
- Cost tracking

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec1-Doc5

Safety Module Overview

Purpose

The Safety Module standardizes safety inspections, hazard identification, corrective actions, and safety documentation.

Responsibilities

- Safety inspections
- Corrective actions
- Safety documents
- Safety training records (v1.0: document storage only)

Key Entities

- SafetyInspection
- Hazard
- CorrectiveAction
- SafetyDocument

v1.0 Workflows

- Perform safety inspections
- Record hazards
- Assign corrective actions
- Upload safety documents

Deferred Items

- Training module
- Incident reporting
- Safety analytics

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec1-Doc6

Project Module Overview

Purpose

The Project Module provides a structured environment for managing project information, documents, and QA/QC workflows.

Responsibilities

- Project setup
- Project documents
- QA/QC workflows
- Cross-module references (equipment, safety)

Key Entities

- Project
- ProjectDocument
- QAQCItem
- ProjectTeamMember

v1.0 Workflows

- Create project
- Upload project documents
- Manage QA/QC items
- Link equipment or safety items to projects

Deferred Items

- RFIs
- Daily Reports
- Scheduling
- Pipeline

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec1-Doc7

Data Model Summary

Purpose

This document summarizes the high-level data model for Driv-en v1.0, focusing on shared entities and cross-module relationships.

Core Entities

- User
- Role
- Permission
- Document
- AuditLog

Module Entities

- Equipment: Equipment, Inspection, MaintenanceRecord
- Safety: SafetyInspection, Hazard, CorrectiveAction
- Project: Project, QAQCItem, ProjectDocument

Relationships

- Projects reference equipment
- Safety inspections reference projects
- Documents reference parent entities
- Audit logs reference all entities

Naming Conventions

- PascalCase for entities
- camelCase for fields
- Singular table names

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec1-Doc8

UI-UX Design Principles

Design Philosophy

Driv-en prioritizes clarity, accessibility, and predictable workflows. Every screen is designed to minimize cognitive load and maximize operational efficiency.

Standards

- Hero title bar with pronunciation line
- Consistent filter bar across modules
- Clean, minimal layout
- High-contrast accessibility
- Predictable button placement

Interaction Rules

- Work Order Status is filter-only
- No nested navigation
- All documents accessible from a single, consistent panel

Accessibility

- WCAG-aligned color contrast
- Large tap targets
- Clear typography hierarchy

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0

Section 2 – Initial Bid Package

Driv-en v1.0 Sec2-Doc1

Overview & Problem Statement

Executive Summary

Driv-en exists to solve the operational fragmentation that contractors and field-driven industries face every day. Companies rely on a patchwork of spreadsheets, text messages, PDFs, and legacy systems that fail to deliver clarity, consistency, or audit-ready documentation. Driv-en consolidates these workflows into a single, modular platform designed for operational excellence.

Industry Problems

- **Fragmented systems** create inconsistent data and duplicated effort.
- **Lack of audit-ready documentation** exposes companies to compliance risk.
- **Poor visibility** across equipment, safety, and project workflows leads to delays and rework.
- **Legacy tools** are bloated, expensive, and difficult to adopt.
- **Field teams** lack simple, predictable workflows that match real-world operations.

Why Driv-en Is Needed

Driv-en provides a unified operational environment where every workflow is intentional, every module is modular, and every action is traceable. The platform is built to be accessible, predictable, and audit-ready from day one.

v1.0 Objective

Deliver a stable, modular foundation that covers:

- Core system functions
- Equipment management
- Safety workflows
- Project documentation and QA/QC

Future versions will expand into RFIs, Daily Reports, Scheduling, Pipeline, and advanced analytics.

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec2-Doc2

Module Scope Summary

Core Module

In Scope:

- Authentication
- Roles & permissions
- Document control
- Audit logs
- Notifications

Out of Scope:

- Multi-company support
- SSO integrations
- Advanced reporting

Equipment Module

In Scope:

- Equipment inventory
- Inspections
- Maintenance logs
- Equipment documents

Out of Scope:

- GPS/telematics
- Cost tracking
- Automated maintenance reminders

Safety Module

In Scope:

- Safety inspections
- Hazards
- Corrective actions
- Safety documents

Out of Scope:

- Incident reporting
- Training module
- Safety analytics

Project Module

In Scope:

- Project setup
- Project documents
- QA/QC workflows
- Cross-module references

Out of Scope:

- RFIs
- Daily Reports
- Scheduling
- Pipeline

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec2-Doc3

Initial Requirements Document

Functional Requirements

- Users can authenticate and access modules based on permissions.
- Equipment can be added, inspected, and maintained.
- Safety inspections can be performed with hazards and corrective actions logged.
- Projects can be created with documents and QA/QC items.
- All documents follow versioning and audit-trail rules.

Non-Functional Requirements

- System must be responsive and mobile-friendly.
- UI must follow Driv-en's accessibility and clarity standards.
- All actions must be logged for auditability.
- Naming conventions must be consistent across modules.

Compliance Requirements

- Document versioning must follow Section 1.7 rules.
- Audit logs must capture user, timestamp, and action.
- Data must be stored securely with role-based access.

Performance Requirements

- Pages must load within acceptable SaaS standards.
- Search and filtering must return results quickly.

Documentation Requirements

- Developer must maintain technical documentation.
- All workflows must be documented for onboarding.

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec2-Doc4

Initial Bid Instructions

Submission Requirements

Bidders must submit:

- Technical approach
- Timeline
- Cost breakdown
- Team structure
- Assumptions
- Risks and mitigations

Format Requirements

- PDF or Word format
- Clear section headings
- Version number included
- Company name on all pages

Deadlines

- Bid submission deadline: *To be defined by Jackie*
- Q&A cutoff: *To be defined*

Evaluation Criteria

- Technical understanding of Driv-en
- Alignment with modular architecture
- Cost realism
- Timeline feasibility
- Communication clarity

Communication Rules

- All questions must be submitted in writing.
- No direct contact outside the defined channels.

Q&A Process

- Questions compiled into a Q&A Addendum.
- Addendum shared with all bidders simultaneously.

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0

Section 2.5 – Bid Phase Documents

Driv-en v1.0 Sec2.5-Doc1

Developer Blueprint (Full Technical Architecture)

Purpose of This Blueprint

This blueprint provides the complete technical foundation for Driv-en v1.0. It defines the architecture, data model, UI/UX standards, module boundaries, API structure, and non-functional requirements that all bidders must follow. It ensures every developer builds the same product, with no assumptions, no scope drift, and no architectural deviation.

Platform Overview

Driv-en is a modular SaaS platform designed for contractors and operational industries. The platform consolidates equipment, safety, and project workflows into a unified, audit-ready system.

v1.0 Modules

- Core
- Equipment
- Safety
- Project

Deferred Modules (Not in v1.0)

- RFIs
- Daily Reports
- Scheduling
- Pipeline
- Integrations
- Advanced analytics

Architectural Philosophy

Modularity

Each module is isolated, self-contained, and interacts only through shared Core entities.

Auditability

Every action must be logged. Every document must be versioned. Nothing is overwritten.

Predictability

UI, workflows, naming conventions, and data structures must be consistent across modules.

Accessibility

All UI must follow Driv-en's accessibility and clarity standards.

No Hidden Logic

All business logic must be server-side. No logic in the UI.

System Architecture

Layered Architecture

- **Core Layer** — Authentication, permissions, document control, audit logs
- **Module Layer** — Equipment, Safety, Project
- **Data Layer** — Shared entities, relationships, naming conventions
- **UI/UX Layer** — Layout standards, filter bar, hero title bar
- **API Layer** — REST or GraphQL endpoints
- **Infrastructure Layer** — Hosting, environments, CI/CD

Technology Stack (Bidder-Defined Within Constraints)

- Modern front-end framework (React, Vue, Angular)
- Modern back-end framework (Node, .NET, Django, etc.)
- Relational database (PostgreSQL preferred)
- REST or GraphQL API
- Cloud hosting (AWS, Azure, GCP)
- Secure environment variable management

Module Architecture

Core Module

Responsibilities

- Authentication
- Roles & permissions
- Document control
- Audit logs
- Notifications
- Company settings

Key Entities

- User
- Role
- Permission

- Document
- AuditLog
- Company

Equipment Module

Responsibilities

- Equipment inventory
- Inspections
- Maintenance logs
- Equipment documents
- Status tracking

Key Entities

- Equipment
- EquipmentType
- Inspection
- MaintenanceRecord
- EquipmentDocument

Safety Module

Responsibilities

- Safety inspections
- Hazards
- Corrective actions
- Safety documents

Key Entities

- SafetyInspection
- Hazard
- CorrectiveAction
- SafetyDocument

Project Module

Responsibilities

- Project setup
- Project documents
- QA/QC workflows
- Cross-module references

Key Entities

- Project
- ProjectDocument
- QAQCItem
- ProjectTeamMember

Data Model Specification

Naming Conventions

- Entities: PascalCase
- Fields: camelCase
- Tables: singular
- Foreign keys: <entity>Id

Core Relationships

- Projects reference equipment
- Safety inspections reference projects
- Documents reference parent entities
- Audit logs reference all entities

Data Integrity Rules

- No orphaned records
- All deletes must be soft deletes
- All updates must be logged

UI/UX Standards

Layout

- Hero title bar with pronunciation line
- Consistent filter bar across modules
- Clean, minimal layout
- High-contrast accessibility

Interaction Rules

- Work Order Status is filter-only
- No nested navigation
- All documents accessible from a single panel
- Predictable button placement

Component Library

- Standardized buttons
- Standardized form fields
- Standardized tables
- Standardized modals
- Standardized icons

API Standards

Endpoint Structure

- /core/...
- /equipment/...
- /safety/...
- /project/...

Response Format

- JSON only
- Standardized success and error objects
- Pagination for list endpoints

Security

- Role-based access control
- No unauthenticated endpoints
- No sensitive data in URLs
- All input validated server-side

Non-Functional Requirements

Performance

- Pages must load within modern SaaS standards
- Search and filtering must be fast

Security

- No hard-coded secrets
- Secure environment variable management
- Enforced RBAC

Documentation

- Developer must maintain technical documentation
- All workflows must be documented

v1.0 Scope Boundaries

In Scope

- Core, Equipment, Safety, Project modules
- Document control
- Audit logs
- Basic reporting (list views, filters)

Out of Scope

- RFIs
- Daily Reports
- Scheduling
- Pipeline
- Integrations
- Advanced analytics

Deliverables Required from Developer

- Fully functional v1.0 platform
- Source code in GitHub
- Technical documentation
- Deployment instructions
- QA test cases
- Admin configuration tools

Acceptance Criteria

- All functionality matches this blueprint
- All UI matches UI/UX standards
- All data matches the data model
- No critical or high-severity bugs
- All tests pass
- All documentation complete

Document Owner: Founder, Driv-en

Version: 1.0

Effective Date: Upon inclusion in the Driv-en v1.0 Development Process

Document Status: Active

Driv-en v1.0 Sec2.5-Doc3

Final Bid Instructions

Purpose of This Document

These instructions define the official rules, requirements, deadlines, and submission standards for all bidders participating in the Driv-en v1.0 development project. All bidders must follow these instructions exactly. Any deviation may result in disqualification.

Submission Requirements

Required Documents

Each bidder must submit a complete proposal containing:

- Technical approach
- Proposed architecture (aligned with the Developer Blueprint)
- Timeline with milestones
- Cost breakdown (fixed-price preferred; hybrid acceptable with justification)
- Team structure and bios
- Assumptions and dependencies
- Identified risks and mitigation strategies
- Clarification questions (if any)

Format Requirements

- PDF or Word format
- Company name on all pages
- Version number included
- Clear section headings
- All pricing in USD
- All timelines in weeks

Submission Method

All proposals must be submitted via email to:

jblood@digitalsafetyinspection.com

No other submission channels are permitted.

Deadlines

Proposal Deadline

All proposals must be submitted by:

Friday, March 6, 2026 – 5:00 PM CST

Late submissions will not be accepted.

Q&A Cutoff

All bidder questions must be submitted by:

Thursday, March 5, 2026 – 5:00 PM CST

Responses will be added to the Q&A Addendum and shared with all bidders.

Short-List Notification

Short-listed bidders will be notified by:

Monday, March 9, 2026

Evaluation Criteria

Proposals will be evaluated using the following weighted criteria:

- Technical understanding of Driv-en's architecture
- Alignment with the Developer Blueprint
- Quality of proposed development approach
- Timeline feasibility
- Cost realism and transparency
- Team qualifications
- Communication clarity
- Risk identification and mitigation

The Bid Evaluation Scoring Sheet will be used to ensure consistency and fairness.

Communication Rules

Permitted Communication

- All questions must be submitted in writing.
- All answers will be shared with all bidders via the Q&A Addendum.
- No private clarifications will be provided.

Prohibited Communication

- No direct contact with the client outside the approved channel.

- No phone calls, text messages, or social media communication.
- No attempts to influence the evaluation process.

Violations may result in immediate disqualification.

Scope Boundaries

Bidders must adhere strictly to the v1.0 scope defined in:

- Developer Blueprint
- Module Scope Summary
- Q&A Addendum
- Scope Clarifications (if issued)

Explicitly Out of Scope

- RFIs
- Daily Reports
- Scheduling
- Pipeline
- Integrations
- Multi-company support
- Advanced analytics

Any inclusion of out-of-scope features will be rejected.

Deliverables Required from the Selected Developer

The selected bidder must deliver:

- Fully functional v1.0 platform
- Source code in GitHub
- Technical documentation
- Deployment instructions
- QA test cases
- Admin configuration tools
- Support during UAT
- Final production deployment

All deliverables must meet the acceptance criteria defined in the Developer Blueprint and SOW.

Assumptions Bidders May Make

- Client will provide timely feedback.
- Client will participate in milestone reviews.
- Client will provide access to required environments.

- No integrations are required in v1.0.

Any additional assumptions must be explicitly listed in the proposal.

Proposal Validity

All proposals must remain valid for **30 days** after submission.

Revision Log

Version	Date	Description	Author
1.0	[Date]	Initial release	Jackie Blood

Driv-en v1.0 Sec2.5-Doc4

Developer Bid Packet

Introduction

Driv-en is a modular SaaS platform designed for contractors and operational industries. The platform consolidates equipment, safety, and project workflows into a unified, audit-ready system. Driv-en v1.0 includes four modules: Core, Equipment, Safety, and Project.

This packet provides all information required for bidders to prepare a complete, accurate, and competitive proposal.

Documents Included in This Packet

Bidders receive the following documents as part of the Driv-en v1.0 bid package:

- **Developer Blueprint (Full Technical Architecture)**
- **Final Bid Instructions**
- **Q&A Addendum (Live Document)**
- **Module Scope Summary**
- **Initial Requirements Document**
- **NDA (Signed copy required before accessing documents)**

These documents define the full v1.0 scope, architecture, UI/UX standards, data model, and bid requirements.

Project Overview

Driv-en v1.0 is a foundational release focused on operational clarity, auditability, and predictable workflows. The platform must be modular, scalable, and built with long-term maintainability in mind.

v1.0 Modules

- Core
- Equipment
- Safety
- Project

Out of Scope

- RFIs
- Daily Reports
- Scheduling
- Pipeline

- Integrations
- Multi-company support
- Advanced analytics

Bid Requirements

Bidders must submit a complete proposal that includes:

- Technical approach aligned with the Developer Blueprint
- Proposed architecture and tech stack
- Timeline with milestones
- Cost breakdown
- Team structure and bios
- Assumptions and dependencies
- Risks and mitigation strategies
- Clarification questions (if any)

All proposals must follow the **Final Bid Instructions**.

Evaluation Process

Proposals will be evaluated using the following criteria:

- Technical understanding of Driv-en's architecture
- Alignment with the Developer Blueprint
- Quality of proposed development approach
- Timeline feasibility
- Cost realism
- Team qualifications
- Communication clarity
- Risk identification and mitigation

The evaluation will be documented using the **Bid Evaluation Scoring Sheet**.

Short-List Process

After initial evaluation:

- Short-listed bidders will be notified via email
- A short-list interview will be scheduled
- Bidders will receive the Short-List Bidder Package, which includes:
 - Developer Blueprint
 - Final Bid Instructions
 - Q&A Addendum
 - Scope Clarifications (if applicable)

Communication Rules

- All questions must be submitted in writing
- All answers will be added to the Q&A Addendum
- No private clarifications will be provided
- No direct contact outside the approved channel

Violations may result in disqualification.

Submission Instructions

All proposals must be submitted by the deadline listed in the **Final Bid Instructions**.

Proposals must be sent to:

jblood@digitalsafetyinspection.com

Late submissions will not be accepted.

Confidentiality

All materials provided in this packet are confidential and proprietary to Digital Safety Inspection, LLC. Bidders must sign the NDA before accessing any documents.

Revision Log

Bid Evaluation Scoring Sheet

Purpose

This scoring sheet provides a structured, objective method for evaluating all initial bids. It ensures fairness, consistency, and traceability across all bidders.

Scoring Categories

Each category is scored on a 1–5 scale (1 = unacceptable, 5 = excellent).

- **Technical Understanding** — How well the bidder understands Driv-en’s modular architecture, v1.0 scope, and design philosophy.
- **Approach & Methodology** — Quality of the proposed development approach, workflow, and sequencing.
- **Timeline Feasibility** — Realism and clarity of the proposed timeline.
- **Cost Structure** — Transparency, competitiveness, and alignment with scope.
- **Team Qualifications** — Experience, relevant skills, and stability of the proposed team.
- **Communication Quality** — Clarity, responsiveness, and professionalism.
- **Risk Identification & Mitigation** — Ability to identify risks and propose realistic mitigations.
- **Assumptions & Dependencies** — Completeness and accuracy of assumptions.

Scoring Table

Category	Weight	Score (1–5)	Weighted Score
Technical Understanding	20%		
Approach & Methodology	20%		
Timeline Feasibility	15%		
Cost Structure	15%		
Team Qualifications	10%		
Communication Quality	10%		
Risk & Mitigation	5%		
Assumptions	5%		
Total	100%	—	

Evaluation Notes

A notes section is included for each bidder to document rationale, concerns, and strengths.

Bid Comparison Matrix

Purpose

This matrix allows you to compare all bidders side-by-side across key dimensions, making short-list selection transparent and defensible.

Comparison Fields

- Company Name
- Total Cost
- Timeline
- Team Composition
- Technical Approach Summary
- Key Strengths
- Key Risks
- Assumptions
- Required Clarifications
- Overall Score (from Scoring Sheet)

Matrix Table

Field	Bidder A	Bidder B	Bidder C	Bidder D	Bidder E	Bidder F
Total Cost						
Timeline						
Team						
Technical Approach						
Strengths						
Risks						
Assumptions						
Clarifications Needed						
Overall Score
